

Max Path Sum → Starting from the root.

```
node.data + max (LST, RST, 0);
```

```
int max_Sum (Node root) {  
    if (root == null)  
        return 0;
```

```
    int x = max_Sum (root.left);
```

```
    int y = max_Sum (root.right);
```

```
    return root.val + max (x, y, 0);
```

```
}
```

Max Sum passing through root.

$\Rightarrow 22$   
    

$\Rightarrow \text{root.val} + \max(x, 0) + \max(y, 0)$

# Max path sum in the tree.

$\Rightarrow$  int maxSum (Node root) {

if (root == Null)  
return 0;

int x  $\Rightarrow$  maxSum (root.left);

int y  $\Rightarrow$  maxSum (root.right);

int cur = root.val + max (x, 0) + max (y, 0);

ans = max (cur, ans)

return root.val + max (x, y, 0);  
}

Q Given a perfect Binary tree.

every parent  
has 2 children  
every level is  
completely filled.
